BEYOND THE IMPOSSIBLE

A few business cases

Use Cases with major companies in the Fortune 500

Protect one of the largest corporate fleet in Europe

Integrate automated security check in "Apps factory"

Mobile Threat Protection for a large mobile fleet

The Client & its Project

- One of the largest energy company in the Fortune 100 with 150,000 + employees
- Protect 100,000 + professional and BYOD smartphones and tablets on Android, iOS and Windows
- Integrate Apps to the IS, secure network access and device usage
- Comply with GDPR rules

Pradeo's challenges

- Manage security of 100,000 + Apps, downloaded or deployed on employees' devices
- Design and deploy security policy and check compliance when using devices, downloading Apps or connecting to the Network
- Protect and monitor the overall fleet, exposed to security threats coming from public Apps stores, networks and OS

Market opportunity

- Major companies engaged in mobility projects to increase performance and efficiency of employees thanks to the interactive capabilities of mobile devices. Next step is security after the adoption of MDM solution

Automation of the Mobile Application Security Testing

The Client & its Project

- The largest pharmaceutical company in the world, with over 100,000 employees
- Manage security testing and behavioral analysis of Apps before distribution to users (500+ Apps)
- Reduce the costs for security audits and face the volume's challenge brought by the Apps factory model (hundreds of Corporate Apps)
- Focus internal security skills on key points thanks to capabilities of Pradeo's engine to automatically control security of Apps

Pradeo's challenges

- Accelerate, enhance and automate the process of Apps validation according to company's specific security policy
- Support the deployment of the "Apps+Store" model at a corporate scale

Market opportunity

- Major companies deploying the "Apps+Store" model, and developing their own apps factory

Use Cases with major companies in the Fortune 500

Enrich B2B offer to protect corporate mobile fleets

Protect consumers using sensitive apps

Mobile Threat Protection for a corporate mobile fleet

The Client & its Project

- In top 10 of telecom operators in the world
- Develop strong B2B activities with large skills in Cybersecurity
- Offer to companies integrated services and managed services according to their needs, namely in the field of mobile fleet management
- Perform up-sell after MDM sales

Pradeo's challenges

- Manage security of large corporate mobile fleet
- Integrate into major MDM/EMM platforms to provide a seamless service to end-client
- Propose predefined security policies to accelerate deployment for companies
- Integrate the administration platform to telco's SOC (Security Operation Center)

Market opportunity

- All telecom operators with existing B2B activities, willing to enrich their offer and generate additional business

In-App Protection against frauds and privacy breaks

The Client & its Project

- Banking subsidiary of La Poste group which is one of the largest company in Europe
- Deploy and promote banking Apps to its clients (B2C)
- Willing to enhance users' security by checking threats coming from their devices' environment: apps, network and OS
- Automatically check and block frauds and privacy breaks in real-time

Pradeo's challenges

- Integrate its security API into sensitive apps to instantaneously detect mobile threats
- Automatically block all behaviors uncompliant with the bank's customized security policy

Market opportunity

- All banks providing/promoting Apps to end users (their own apps or those of partners) that are willing to control security of their clients to avoid financial loss or data retrieval
