

IBM License Metric Tool

Solution description:

The IBM License Metric Tool (ILMT) helps you maintain an inventory of the PVU-based software deployed for your Full Capacity or Virtualization (Sub-) Capacity environment and measures the PVU licenses required by software Product. It is intended to help you manage your IBM software licensing requirements and help you maintain an audit ready posture. Customers are responsible for supplying hardware and installation services required for installing the tool.

Value Package Sandbox environment:

Use the Value Package Sandbox to **develop your skills in using ILMT with your clients.**

You will be guided through a scenario where you will use ILMT to perform key tasks including:

- Check that ILMT is correctly configured
- Make sure the data is imported correctly
- Check that software applications are discovered
- Generate an audit report

To do this, you will have access to a pre-configured ILMT instance with sample data gathered from a real environment.

This Sandbox can only be used by a single user at a time. If you wish to train several people in your organization, you can either use it in a group education session or use the provided procedure to restore the environment to its initial state.

Training materials:

A training guide provided with the Sandbox will guide you through typical use cases.
