

IBM Blockchain Platform

Product description

Blockchain is a shared immutable ledger for recording the history of transactions.

Hyperledger Fabric is a new blockchain framework built specifically for businesses, allowing for the creation of permissioned networks with known entities.

By using the IBM Blockchain Platform built on Hyperledger Fabric, businesses can digitize and streamline existing business processes as well as create new business models that were previously not feasible due to cost, regulation, and/or other constraints.

Sandbox environment

With the IBM PartnerWorld Value Package Sandbox, you have access to a ready-to-use Blockchain environment with the following products and tools pre-installed and pre-configured:

- Hyperledger Fabric 1.4
- IBM Blockchain Platform development tools
 - Visual Studio Code (VSC)
 - IBM Blockchain Platform 2.0 extension for VSC

Training materials

The training guide provided with the sandbox will guide you through the development and testing of a Smart Contract with the IBP2.0 development tool.
